Claim Rejections - 35 USC § 101

1. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 24 and 25 are rejected under 35 U.S.C.101 because the claimed invention is directed to non-statutory subject matter as follows. Claims 24 and 25 define a "computer readable program medium storing..." embodying functional descriptive material. However, the claim does not define a non-transitory computer-readable medium or memory and is thus non-statutory for that reason (i.e., "examination the pending claims must be interpreted as broadly as their terms reasonably allow). The broadest reasonable interpretation of a claim drawn to a computer readable medium (also called machine readable medium and other such variations) typically covers forms of non-transitory tangible media and transitory propagating signals per se in view of the ordinary and customary meaning of computer readable media, particularly when the specification is silent. See MPEP 2111.01. When the broadest reasonable interpretation of a claim covers a signal per se, the claim must be rejected under 35 U.S.C. § 101 as covering non-statutory subject matter. See In see Official Gazette Notice 1351 OG212, February 23,2010). That is, the scope of the presently claimed " computer readable program medium storing..." typically covers forms of non-transitory tangible media and transitory propagating signals per se. The examiner suggests amending the claim to embody the program on a "computer readable medium.." and adding the limitation "non-transitory " to the claim or equivalent in order to make the claim statutory. Any amendment to the claim should be commensurate with its corresponding disclosure.

Reasons for Allowance

2. Claims 1-17, 19-22 are allowed.
3. The following is an examiner's statement of reasons for allowance. The closest prior art of Svetkoff et al (6366357) and Averbuch et al (7085401) on record failed to teach or suggest, maintaining a test pattern image, said test pattern image comprising alignment features and image analysis features; imaging a test chart using imaging device to form a second image, said test chart containing a representation of said test pattern image; registering said test pattern image and said second image using region based matching operating on said alignment features; and measuring performance parameters by analyzing said image analysis features. Therefore, in combination with all the other limitations claims 1-17, 20-22 are allowable.
4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
